**THIS GUIDE IS FOR THE DV407 MIMO WINDSHIELD MOUNT ANTENNA ONLY**

**Before starting, please review the photos below to see all the components of the WIFI setup**

**If for some reason your antenna is not labeled like the photo below, take note of the correct side that needs a clear view of the sky**

**Notice the Dimple on the antenna. THIS IS THE BOTTOM OF THE ANTENNA!**

# Installation Guideline

Mount the antenna on the upper corner of the windshield. Clean your mounting location prior to applying the 3M tape

Dimple facing down

Mount the antenna on the same side as the PDC (Upper left corner for PDC's mounted under the driver's dash, Upper right corner for PDC's mounted under the passenger side dash)

Plug the antenna cables into the WIFI adapter.

After the WIFI adapter is plugged into the USB port of the PCD, secure the mount cover with the 4 Philips screws

Coil the extra antenna cable and store it in a safe location next to the PDC.  
**NEVER BEND THE EXTRA CABLE**

When the PDC is powered up verify the blue LED light is on and flashing. This will confirm the adapter is installed correctly
