

## Protecting drivers and fleets with Actual Intelligence

Rosco's new Driver Management System (DMS) uses the latest AI to track driver's eyes and head positions for signs of drowsiness and distraction. Prevent an event before it happens with the most accurate AI in the fleet management market.

# DMS

**Driver Management System for  
Dual-Vision® XC4 Cameras**

P/N: DM100

- **Drowsiness**  
DM100 detects drowsiness and is triggered when a driver yawns or has their eyes closed for a prolonged period of time.
- **Distraction**  
When a driver is distracted with their eyes averted from the road, the DM100 will detect the risky behavior and send an alert to the driver and fleet manager.
- **Phone Use**  
DM100 AI technology can detect when the driver is using a phone while driving.

# Driver Management System

Rosco's new Driver Management System (DMS) is the newest addition to the Dual-Vision® XC4 suite of recording safety products. The DM100 uses the latest in AI technology to detect unsafe behaviors while the vehicle is in operation.

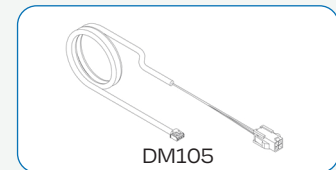

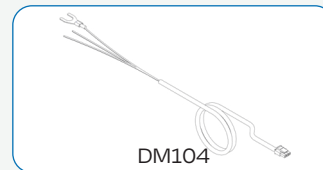

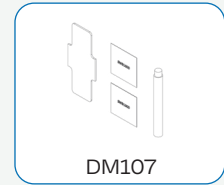

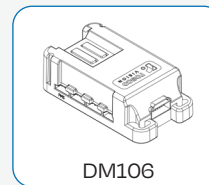

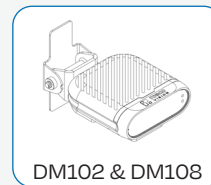

The DM100 unit seamlessly integrates with the DVXC4 windshield based recorder to provide in-cab alerts to the driver so distracted driving behaviors can be corrected before an Event occurs. Unsafe driving behaviors are also flagged and recorded for review by the fleet manager.

Don't wait for an Event to occur, stop it before it happens with on-the-spot coaching for drivers. Adding DM100 to your fleet management allows for proactive, preventative measures to be put in place for the health and efficiency of your fleet.

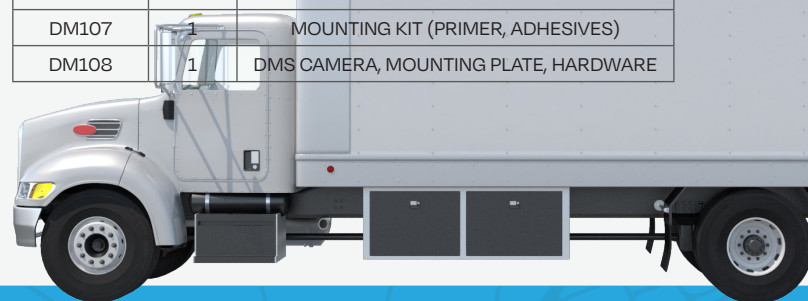

Protect your drivers and increase fleet productivity with the most accurate DMS technology available today.
